SECOND QUARTER 1984 SEASONALLY ADJUSTED

INDIANA NONAGRICULTURAL EMPLOYMENT

Statewide nonagricultural establishment employment fell very slightly from the first to the second quarter 1984. The current quarterly loss was the first recorded since the similar reporting periods last year. The negative change from first quarter probably signified an adjustment level because the gain of over 22,000 from the fourth quarter 1983 to the first quarter 1984 was inordinately high due to the economic recovery.

Manufacturing employment recorded a small gain between quarters and rose moderately over the year. Though the change over the quarter was minute, it marked the seventh consecutive quarterly increase in manufacturing employment. However, the meager increase may also indicate manufacturing employment is stabilizing and only gradual additions in employment may occur during the remainder of 1984.

Nonmanufacturing employment fell over the quarter but rose over the year. The negative change between quarters resulted from more school personnel being furloughed in June than ordinarily happens. Over the year, nonmanufacturing employment reflected a diminutive advance (less than one per cent). Nonetheless, continuing upturns took place in the trade and services divisions which indicate steady economic growth through the current year should occur.

1982 Indiana Per Capita Personal Income

Rises Less than Half of U.S. Increase

In the recessionary year 1982, Indiana residents received about $9 in personal income per person for each $10 received on average for each person in all the States. This comparison was based on per capita personal income data recently released by the Bureau of Economic Analysis in the U.S. Department of Commerce.

While per capita personal income of the U.S. increased $518 to $11,100 in 1982, Indiana per capita income increased $234 to $9,994. This was 90 per cent of the national average. The Indiana increase was less than half of the national rise.

Three Counties Top National Rate

The Indianapolis SMSA (whose per capita personal income was $11,236) was the only Metropolitan Statistical Area in Indiana which topped the national rate in 1982. What is more, only three Indiana counties (Hamilton, Marion and Vanderburgh) had rates higher than the national rate.

In keeping with a tendency for urban and suburban counties to be near the top rank, Hamilton County(includes a white collar suburb of Indianapolis) ranked first in the State with per capita personal income of $11,750, which was $1,756 above the State average and $650 above the national average.

Marion County, which comprises Indianapolis, was second with $11,718 and Vanderburgh County, which includes Evansville, was third with $11,488. Crawford County again has the lowest per capita personal income with $6,448 in 1982.

Special Situations Trigger Major Shifts

While most counties tend to maintain their relative ranking in per capita personal income from one year to the next, a few change considerably as a result of special circumstances, such as a major plant closing, or opening, or a large construction project. For instance, the Marble Hill construction project caused per capita personal income to jump in Jefferson County until the project was stoped.

Another factor which affects per capita personal income is the labor force participation rate -- the proportion of the population that is working. Counties with a higher than average number of children or elderly persons will show a lower participation rate and lower per capita personal income than one with a high per cent of employed persons.

CPI GEOGRAPHICAL SERIES

Consumer Price Index -- June 1984

	CPI-W	CPI-U*
U.S. City Average	306.2	310.7
New York	293.0	301.6
Chicago	298.3	310.0
Cincinnati	312.3**	321.9**
St. Louis	297.3**	305.4**
Los Angeles	303.4	305.6

No Consumer Price Index (CPI) is produced by the Bureau of Labor Statistics for Indiana, or any Indiana cities. CPI series for several cities are published, including the ones listed here.

* CPI-U Series, beginning January 1983 changed the way home owner costs are measured to rental equivalence - based on implicit rent owners would have to pay to rent homes they own.

\+ Seasonally adjusted per cent change.

** May 1984

Labor force data are based on place of residence and include all types of employment; nonagricultural wage and salaried, self-employed domestics and farm workers.

Does not add due to rounding. (P-Preliminary)
Monthly estimates for the State and SMSAs are adjusted to new benchmark data at the end of each year.

*Not published to avoid disclosure of individual firm data.

Covered Employment includes employees working for firms subject to the Indiana Employment Security Act. The Act, in general, includes employers with one or more employees. Excluded are railroads, small non-profit institutions and churches. Beginning with January 1, 1978, all state and local government employment, including that in schools, is covered. Accredited private and parochial school employment is also covered. However, only part of the employment in private households and on farms is included in the expanded coverage.

Average weekly earnings are computed from the quarterly earnings and average employment of all employees in establishments covered by the Act. The figures are computed from total payrolls so they include all employees--janitors, company officers, factory workers, office employees--instead of only production workers. The new coverage in 1978 affects the all covered employment average so these averages are discontinuous from those calculated for prior years.
